

Intercom (simple edition)

Complete intercom system which allows communication between car lit (control unit) and the machine room (interphone handset). The system can be equipped with an optional push-button in the car. Available in 24V or 12V.

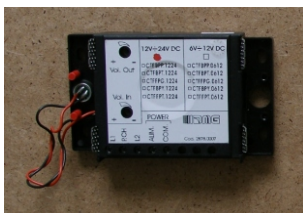

COMPLETE INTERCOM (simple edition)

Code: 3617

(includes the control unit and the interphone handset)

Complete intercom system (ce cert)

The intercom system is composed of a lift car intercom unit containing the amplifiers required by the system. This is connected to one or more floor intercoms and/or one or more interphone handsets URMET 1131. The system allows communication between the lift car (in which the lift car intercom is installed), the main floor (where the floor intercom can be installed) and the machine room (where both floor intercom and interphone handset can be installed). Communication can also be set between the engine room and a security post by using an interphone handset or a floor intercom. The floor intercom is equipped with internal and external volume adjustment.
